

Three-Phase Asynchronous Motor

This high-efficiency three-phase asynchronous motor is designed for industrial applications. It features robust construction and an optimized cooling system for reliable performance under varying loads.

Product Overview

Industrial Three-Phase Performance

This high-efficiency three-phase asynchronous motor is engineered specifically for demanding industrial environments. Featuring a robust, durable construction and an optimized cooling system, it ensures reliable performance across a wide range of constant speed applications. It is the ideal choice for powering essential machinery such as pumps, fans, and compressors.

Performance Metrics

Typical Applications

- Pumps
- Fans
- Compressors
- General industrial machinery

Motor Technology

Three-Phase Asynchronous

Design Features

Cooling

Optimized integrated cooling system

Design Characteristics

Robust construction, Constant speed, High-efficiency, Industrial grade
