

Three-Phase Electric Motor

This is a MS series three-phase electric motor. It is designed for efficient and reliable power conversion in a variety of industrial applications.

Overview

High-Performance Peripheral Pump

This peripheral pump is engineered for reliability and efficiency in domestic and small-scale irrigation applications. Designed to handle clean water and non-aggressive liquids, it is an ideal solution for increasing water pressure in residential systems. Its compact and economical design ensures safe operation and easy integration into automatic water distribution setups.

Model Series

Application & Usage

Suitable Applications

Domestic fitting, Small-scale irrigation, Water pressure boosting, Automatic water distribution

Compatibility

Fluid Compatibility

- Clean water
- Non-aggressive liquids
- Free from sand
- Free from solid impurities

Features

Key Benefits

Economical • Reliable • Safe • Easy to operate
