

Three-Phase Industrial Reactor

This three-phase reactor is designed for industrial applications. It provides stable electrical performance and efficient energy management, particularly for apparel and textile machinery.

Product Overview

Industrial Three-Phase Reactor

This three-phase industrial reactor is engineered for high-performance electrical stability and efficient energy management. Designed for demanding environments such as apparel and textile machinery, it features robust construction and reliable components. Its durable build ensures consistent operation in industrial applications, helping to maintain system integrity and power quality.

Technical Specifications

Phase Configuration	Three-Phase
Primary Applications	Apparel Machinery, Textile Machinery, Industrial Power Systems

Design and Construction

Winding Color	Red
Support Frame Color	Blue
Construction Style	Cylindrical Winding
