

Three-Phase Land Generator

This three-phase generator is designed for land-based applications. It features a robust construction suitable for industrial or heavy-duty use.

General Overview

Industrial Three-Phase Power Solution

The XN5 is a high-performance three-phase generator engineered specifically for land-based industrial operations. Designed for reliability and power stability, this unit is built to withstand rigorous use in demanding environments. It provides a robust solution for professional buyers seeking dependable, heavy-duty power generation capabilities.

Technical Specifications

Phase Configuration	Three-Phase
Primary Application	Industrial, Land-based
