

Three-Phase Motor Control Box, 5.5kW

This control box enables manual operation of three-phase motors up to 5.5 kW (7.5 HP). It is suitable for applications requiring motor control and protection.

Overview

Professional Three-Phase Motor Control

The DY-T01 is a robust, manually operated control box engineered specifically for three-phase motor applications. Supporting power ratings up to 5.5kW (7.5HP), this unit provides reliable control and essential operational safety. It is a versatile solution designed for industrial and commercial environments requiring dependable motor management.
