

Three-Phase Water-Cooled Diesel Generator Set

This series of generator sets is powered by a Perkins engine, ensuring high stability and reliability. It is widely used in communication, industry, mining, and rescue operations.

Overview

Professional Power Solutions

This three-phase water-cooled generator set is engineered for high-demand environments requiring a stable and consistent power supply. Designed for durability and long-term performance, it provides efficient thermal management and reliable electrical output. The system is ideal for critical infrastructure, including industrial facilities, communication hubs, mining operations, and emergency backup services.

Technical Specifications

Performance Metrics

8 kW Standby Power	7 kW Prime Power	2.9 L/H Fuel Consumption
------------------------------	----------------------------	------------------------------------

Engine Configuration

- Engine Type: 403D-11G
- Cylinder Count: 3L
- Cooling System: Water-cooled

Certifications

Industry Standards	ISO 9001, ISO 14001, OHSAS 18001
--------------------	----------------------------------

Applications

Primary Applications

Communication • Industrial • Mining • Military • Emergency Backup
