

Three-Piece Ball Valve

This three-piece ball valve is designed with a sphere as its closure, enabling valve opening and closing around the center line of the body. It is mainly used in pipelines to cut off, distribute, and change the direction of media flow.

Product Overview

Industrial Flow Control

This three-piece ball valve is engineered for demanding industrial environments, providing reliable cutting, distribution, and flow direction control. Its robust construction ensures high durability and excellent sealing capabilities, making it an ideal choice for critical applications such as chemical processing, oil and gas, and water treatment systems. The design facilitates ease of maintenance while maintaining high performance standards for professional fluid management.

Technical Specifications

Valve Type	Three-piece ball valve
Material Grade	WC9
Pressure Rating	900 Class

Certifications

Compliance & Standards	TUV, CE, TS
