

Three-Stage Home Water Purification System

This three-stage water purification system is designed for household use, delivering filtered water directly from plumbing lines. It features three filter cartridges within stainless steel canisters, along with a pressure gauge and mounting bracket.

Overview

Three-Stage Home Water Purification System

This high-efficiency three-stage water purification system is engineered for residential plumbing integration. It utilizes a comprehensive multi-stage filtration process, combining sediment removal, activated carbon filtration, and ultrafiltration to effectively reduce impurities. Designed for durability and ease of use, the unit features robust stainless steel canisters, a built-in pressure gauge for performance monitoring, and a mounting bracket for secure installation.

Technical Specifications

Filtration Stages

- Sediment Removal
- Activated Carbon Filtration
- Ultrafiltration

Dimensions	340 x 115 x 345 mm
------------	--------------------

Construction & Design

Housing Material	Stainless Steel
Monitoring Features	Pressure Gauge
Installation Type	Wall-mounted (includes bracket)
