Through-Hole Green Light Emitting Diodes

These are through-hole green light emitting diodes (LEDs) with a clear lens. They have a diameter of 7.8mm and are designed for easy installation on printed circuit boards.

Product Overview

Through-Hole Green LED Overview

These high-quality through-hole green light emitting diodes (LEDs) are designed for reliable performance in various electronic applications. Featuring a clear lens and a 7.8mm diameter, they are optimized for easy installation on printed circuit boards (PCBs). They serve as an ideal solution for indicator lights, visual displays, and general electronic signaling needs.

Physical Characteristics

Diameter	7.8 mm
Lens Type	Clear
Mounting Style	Through-Hole

Applications

Common Applications	Indicator Lights, Displays, Electronic Signaling, PCB Assembly

Key Features

Emitted Color
Green
