

Tidal Power Hydro-Generator Unit

This hydro-generator unit is designed for tidal power plants. It features a robust metallic construction with a central circular opening and internal radial supports for efficient energy conversion.

Product Overview

Tidal Power Hydro-Generator Unit

This high-capacity hydro-generator unit is engineered specifically for tidal power plant applications. Designed for robust performance in marine environments, it features a durable metallic construction with optimized radial supports. The unit provides efficient energy conversion capabilities, making it a reliable choice for large-scale renewable energy infrastructure.

Technical Specifications

Rated Power Capacity

50 MW

Max Power Output

Maximum Operating Head	10 m
Unit Diameter	8 m
