

Tie Rod End Assembly

This tie rod end assembly connects the steering linkage to the wheel hub. It allows for precise steering movement and accommodates the suspension's motion.

Product Overview

High-Performance Steering Component

This tie rod end assembly acts as a vital link between your vehicle's steering linkage and the wheel hub, ensuring responsive handling. Designed with a robust ball joint, it facilitates smooth motion while gracefully accommodating the vertical travel of the suspension system. The unit is engineered for long-term reliability, featuring integrated lubrication fittings and a protective boot to guard against environmental contaminants.

Technical Specifications

Design Features

- Ball joint articulation for precise steering
- Threaded rod for adjustable wheel alignment
- Integrated grease fitting for maintenance
- Protective boot to seal against debris

Construction Status

Wear-Resistant • Durable Construction

Application

Steering System, Suspension Linkage, Wheel Hub Connection
