

Timber Grapple Loader

This timber grapple loader is designed for efficiently handling timber and logs. Its powerful hydraulic system ensures precise control of the grapple for secure loading and unloading.

Overview

High-Performance Timber Handling

The Timber Grapple Loader is engineered for high efficiency and reliability in forestry and logging operations. Featuring a powerful, fuel-efficient engine and an optimized hydraulic system, it delivers strong breakout force and smooth, fast operation. Its articulated frame design ensures flexible movement and a small turning radius, allowing for excellent maneuverability across diverse construction and logging environments.

Performance & Efficiency

Engine Performance

1 High

Fuel Efficiency

1 High

Breakout Force

Key Operational Features

- Optimized work device design
- Smooth and fast operation
- High breakout force
- Fuel-efficient engine

Design & Construction

Build Quality

Wear-resistant material • Leak-proof hydraulic system • Reinforced chassis

Chassis & Mobility

Articulated Frame, Small Turning Radius, High Traffic Ability

Operator Environment

Cab Specifications

- New type steel structure
- Sealing and damping
- Spacious interior
- Enhanced visibility
