

Time Delay Relay

This time delay relay is designed for industrial automation and control applications. It features a wide timing range, high accuracy, and reliable performance.

Overview

Industrial Time Delay Relay

The DH48S 1Z/2Z is a high-performance time delay relay engineered for precision in industrial automation and control systems. It features a wide timing range and high accuracy, ensuring reliable operation in demanding environments. Designed for easy integration, the unit is housed in a compact enclosure suitable for DIN rail mounting, making it an ideal choice for process control, machine automation, and complex timing applications.

Technical Specifications

Model	DH48S 1Z/2Z
Mounting Type	DIN Rail

Key Features

Typical Applications	Process Control, Machine Automation, Timing Control, Industrial Automation
