

# Tin Coated 5L Water Heater Component

This tin-coated 5L container is designed for use in water heaters. It features copper pipes and a finned section, suggesting it is used for heating or cooling fluids.

## Product Overview

### High-Efficiency Heating Component

This 5L tin-coated water heater component is engineered for durability and reliable performance in fluid heating systems. Featuring a high-quality, even tin coating, the unit ensures optimized heat distribution and long-term resistance to corrosion. Its robust construction makes it an ideal selection for integration into professional-grade household electrical appliances.

## Technical Specifications

Capacity	5 L
Net Weight	1 KG

## Key Features

Highlights	Even Tin Coating, High Efficiency, Durable Construction
