

Tin Plated Copper Cable Lug

This cable lug is made from 99.9% copper and features a tin-plated surface. It is designed for use with electric power cables and electrical equipment connections.

Overview

Professional Grade Cable Termination

This high-performance cable lug is engineered for secure and reliable electrical connections. Manufactured from high-purity copper and finished with a tin plating, it ensures excellent conductivity and superior corrosion resistance. The design features a convenient inspection window, allowing for quick and accurate verification of wire insertion during installation.

Technical Specifications

Copper Purity	99.9 %
Surface Treatment	Tin Plated
Design Features	Inspection Window, Corrosion Resistant, High Conductivity

Applications

Primary Applications

- Electric power cable termination
- Copper conductor connection
- Electrical equipment interfacing
- Power distribution systems
- Control panels
