

# Tomato Paste Processing Plant

This industrial plant processes fresh tomatoes into paste. It is capable of handling process capacities from 20-2000 tons of fresh tomatoes per day.

## ADDITIONAL IMAGES

## Overview

### Industrial Tomato Paste Processing

This comprehensive tomato paste processing plant offers a scalable solution for high-volume food manufacturing, ranging from 20 to 2000 tons of fresh tomato input per day. Designed for industrial efficiency and hygiene, the system utilizes advanced stainless steel components to handle the entire production lifecycle from raw fruit processing to final packaging. It ensures consistent, high-quality output suitable for global distribution.

## Technical Specifications

### Daily Capacity

**20 Tons/Day**  
Minimum Capacity

**2000 Tons/Day**  
Maximum Capacity

### Production Stages

- Washing
- Sorting
- Crushing
- Heating
- Pulping
- Evaporation
- Sterilization
- Aseptic Filling

## Packaging Options

### Supported Formats

220L Aseptic Bag, 70g-4.5kg Tin Can, Small Pouch

## Operational Standards

### Automation Level

Automated Controls • Continuous Processing

### Primary Material

Stainless Steel
