

Tool Spring Balancer with 360-Degree Rotation

This spring balancer allows free rotation between the hook and body. It is designed to suspend tools and equipment, providing ergonomic assistance and reducing operator fatigue.

Product Overview

Ergonomic Tool Suspension

The Tool Spring Balancer is designed to neutralize the weight of suspended equipment, effectively making heavy tools feel weightless during operation. By utilizing an adjustable spring tension mechanism, it significantly reduces worker fatigue and enhances operational efficiency while protecting tools from accidental damage. Featuring 360-degree rotation and a manual locking device, this durable lifting tool is engineered for long-term reliability in demanding industrial environments.

Technical Specifications

Rotation	360 degrees
Locking Device	Yes
Industry Experience	20 years

Key Benefits

Operational Advantages

- Neutralizes tool weight for ergonomic handling
- Reduces operator fatigue
- Prevents tool damage
- Improves working efficiency
- Durable construction for long service life

Ideal Applications	Assembly lines, Manufacturing, Material handling, Industrial maintenance
