

Toy Impact Tester - 2 m/s

This toy impact tester is designed to evaluate the impact resistance and durability of toys. It delivers impact velocities up to 2 m/s to ensure compliance with safety standards.

Overview

Professional Impact Assessment

The Toy Impact Tester is a high-precision instrument engineered to simulate the structural performance of riding toys during impact scenarios. By replicating real-world child usage conditions at a controlled speed of 2 m/s, it ensures products meet rigorous safety standards. This tester provides essential durability data, helping manufacturers verify the structural integrity of ride-on toys under stress.

Technical Specifications

Performance Metrics

2 m/s Test Speed	90 cm Test Passage Width	650 kg Total Weight
----------------------------	------------------------------------	-------------------------------

Supported Load Weights

- 25 Kg
- 50 Kg

Power Supply

1.AC 380V 50Hz

Standards & Compliance

Compliance Standards

EN-71, ISO 8124-1

Dimensions

Physical Dimensions

Component	Dimensions (WxDxH)
Main Machine	153 x 450 x 156 cm
Controller	36 x 32 x 100 cm
