

Tracked Hydraulic Rock Drill

This hydraulic rock drill is mounted on a tracked chassis. It is suitable for drilling applications in open-pit mining and construction sites.

Overview

High-Performance Tracked Hydraulic Rock Drill

This tracked hydraulic rock drill is engineered for demanding open-pit mining and construction environments. Featuring a robust boom arm and hydraulic drilling mechanism, it provides exceptional stability and precision. The tracked chassis ensures superior mobility and traction, allowing operators to navigate rough terrain with ease and efficiency.

Technical Specifications

Key Components

- Hydraulic boom arm
- Integrated drilling mechanism
- Heavy-duty hydraulic support cylinders
- All-terrain tracked undercarriage

Mobility System	Tracked Chassis
Primary Applications	Open-Pit Mining, Construction Sites, Rough Terrain
