

Tractor-Driven DC Welding Generator

This DC welding generator is engineered for tractor drive, delivering a dependable power source for welding. Utilizing the tractor's engine, it provides a stable and consistent welding current for on-site tasks.

Overview

Tractor-Driven Welding Power

The AX-C1-400 is a high-performance D.C. welding generator specifically engineered for tractor-drive applications. By leveraging the tractor's engine as a primary mover, it provides a reliable and consistent power source for demanding welding operations. Its design prioritizes portability and rugged durability, making it an ideal solution for on-site repairs and construction tasks in remote or off-grid locations.

Technical Specifications

Welding Current Type	DC
Power Source	Tractor PTO / Engine Driven
Model Identifier	AX-C1-400

Features

Key Features

- Tractor-driven portability
- Robust construction for demanding environments
- Stable and consistent welding current
- Integrated control panel for parameter adjustment

Application Suitability	On-site welding, Remote operations, Field maintenance, Agricultural repair
