

Tractor-Mounted Wood Processing Head

This cutting harvester head attaches to a tractor for efficient wood processing. It uses a robust hydraulic arm to lift and feed logs into a high-capacity chipper.

Overview

High-Efficiency Wood Processing

This tractor-mounted cutting harvester head is engineered for high-volume wood processing in forestry operations. The system features a robust hydraulic arm for precise lifting and feeding of logs into a high-capacity chipper. Designed to optimize productivity and reduce manual labor, it provides a mobile and powerful solution for efficient wood conversion.

Technical Specifications

Primary Application

Forestry Operations • Wood Processing • Log Chipping

System Type

Tractor-Mounted Harvester Head

Key Features

Hydraulic Arm, High-Capacity Chipper, Mobile Forestry Solution, Heavy-Duty Construction
