

# Trailer-Mounted Concrete Pump

This trailer-mounted concrete pump efficiently conveys concrete for various construction applications. Its high-capacity pumping system delivers concrete over considerable distances and heights.

## Overview

### High-Efficiency Concrete Conveying

This trailer-mounted concrete pump is engineered for robust performance in demanding construction environments such as building foundations, bridges, and tunnels. Featuring an advanced slanted gate valve and a constant-power variable hydraulic pump, it ensures smooth concrete flow and optimized power utilization. The machine's mobile design allows for rapid transport and setup, making it an ideal solution for high-capacity pumping over significant distances.

## Performance Metrics

### Key Performance Metrics

**60 HBT**

Model Series

## Hydraulic System

### Feeding Adjustment

Manual • Automatic

### Main Hydraulic Pump

Constant-power variable pump

## Technical Features

### Operational Advantages

- High work efficiency
- Convenient operation
- Excellent concrete casting quality
- Reasonable power distribution from electric motor

### Valve System

Slanted gate valve

### Cleaning Capability

High pressure, large displacement water pump for residual concrete removal

## Applications

### Target Applications

Building Foundations, Bridges, Tunnels, General Construction

## Design & Mobility

### Mounting

Trailer-mounted for easy transportation

### Safety & Control

Yes
