

Transmission Fluid Reservoir Tank

This durable tank is designed for automotive transmission systems. It provides reliable fluid storage, ensuring optimal transmission performance with its robust construction and secure mounting.

Product Overview

High-Performance Transmission Fluid Reservoir

This robust reservoir tank is engineered for specialized automotive transmission systems, providing a reliable and secure storage solution. The unit is constructed from high-quality materials to ensure long-term resistance against corrosion and potential leaks. Designed for durability, it features an integrated mounting system to facilitate secure and stable installation in demanding vehicle environments.

Design and Build

Finish Color	Red
Cap Type	Chrome filler cap
Key Features	Corrosion resistant, Leak proof, Integrated mounting brackets

Application

System Compatibility	Automotive Transmission Systems
