

Transportation Infrastructure Project Management

These services provide comprehensive solutions for various transportation projects, ensuring flexible and scientific approaches. Expertise includes intelligent highway systems, city subways, light rail transportation, and inter-city railway construction.

Service Overview

Transportation Infrastructure Solutions

This service provides comprehensive BOT (Build-Operate-Transfer) and EPC (Engineering, Procurement, and Construction) general contracting for large-scale transportation projects. The solution integrates advanced technology, capital management, and professional engineering services to deliver turnkey infrastructure. Key focus areas include intelligent highway systems, city subway networks, light rail, and inter-city railway construction.

Service Capabilities

Contracting Models

BOT • EPC • Turnkey Project

Infrastructure Expertise

Intelligent Highway Systems, City Subway Construction, Light Rail Transportation, Inter-city Railway Construction

Quality & Standards

Project Commitments

- Environment-friendly design models
- Technically advanced infrastructure
- First-class engineering quality
- Comprehensive project management
