

Trichloroisocyanuric Acid

Trichloroisocyanuric acid is a compound used as a disinfectant. It is commonly utilized in swimming pools for water treatment.

Product Overview

High-Efficiency Disinfectant and Bleaching Agent

Trichloroisocyanuric Acid is a powerful chemical compound widely utilized as a disinfectant, algaecide, and bleaching agent in various industrial and agricultural sectors. Known for its high chlorine content and stable chemical properties, it offers effective control against microorganisms, fungi, and algae. Its concentrated nature makes it an economical and reliable choice for large-scale sanitation and water treatment applications.

Chemical Properties

Chemical Formula	C ₃ Cl ₃ N ₃ O ₃
Active Chlorine	90 %

Applications

Primary Applications	Water Treatment, Agricultural Sanitation, Industrial Bleaching, Aquaculture Disinfection
----------------------	--

Safety and Compliance

Quality Compliance

Industrial Grade • High Stability
