

Trimming Dozer

The trimming dozer is a specialized machine for precision grading and leveling tasks. It features a robust undercarriage with tracks for stability and accurate material displacement.

Product Overview

Precision and Versatility

The SB08E-3 trimming dozer is engineered for high-efficiency material clearing and leveling in demanding environments such as ports, factories, and docks. It features a specialized blade design that tilts forward and backward to maximize stacking capacity. With enhanced cooling systems and advanced filtration, this machine delivers consistent performance in extreme working conditions.

Technical Features

Engine & Cooling

- Secondary air intake filter
- Enlarged radiator pipe for high-temperature operation
- Advanced dust protection system

Blade Design

Large-angled blade capable of forward and backward tilting for increased material displacement.

Operational Durability

Compliance

International Certification • Standard Assessment Verified

Safety Equipment

Rear protection devices, Durable undercarriage, Impact resistant design
