

Triple Port RJ45 Underground Network Faceplate

This network faceplate is designed for underground or in-wall installations. It features a durable metal construction with three RJ45 ports, each marked with a computer icon.

Product Overview

Professional Underground Network Connectivity

This triple port RJ45 network faceplate is engineered for robust performance in underground or in-wall installations. The durable metal construction ensures long-lasting protection for network connections while maintaining a professional aesthetic. Each of the three ports is clearly identified, making it an ideal solution for organized and accessible network infrastructure in both residential and commercial environments.
