

Truck and Bus Liquid Tank Car

This tank car is designed for transporting liquids using trucks and buses. The cylindrical tank is mounted on a railway chassis and includes safety features like railings and access ladders.

Product Overview

Industrial Liquid Transportation Solution

This liquid tank car is professionally engineered for the secure transport of light oils via railway infrastructure. Designed for durability and operational safety, it features a robust cylindrical tank body mounted on a stable chassis with high-performance suspension. Integrated access ladders, safety railings, and specialized filling/discharge ports ensure ease of use and compliance with logistical transport standards.

Technical Specifications

Safety Equipment

- Safety railings
- Access ladders
- Filling and discharge ports

Cargo Compatibility

Light Oil, Industrial Liquids

Design Type

Cylindrical Tank on Railway Chassis
