

Truck Brake Bottom Plate

This brake bottom plate is designed for use in truck and construction machinery. It is constructed from ductile iron casting, ensuring reliable braking performance.

Product Overview

Professional Grade Brake Component

This truck brake bottom plate is engineered for heavy-duty applications in trucks and construction machinery. Constructed from high-quality ductile iron, the component is built for durability and reliable performance under demanding conditions. Designed for precision, it is manufactured to meet custom specifications for seamless integration into existing braking systems.

Technical Specifications

Dimensional Data

Measurement	Value
Hole Dividing Round	192
Inner Diameter	167

Material	Ductile Iron Casting
----------	----------------------

Weight	10.3 kg
--------	---------

Manufacturing & Compliance

Production Capacity

30000 pieces

Monthly Capacity

Manufacturing Capabilities

- Lost foam production line
- Tokyu molding line
- Auto hydrostatic pressure production line
- CNC machining center

Certifications	ISO, TS
----------------	---------

Logistics & Delivery

Shipping Ports

- Shanghai
- Wuhan

Packing	Wood pallet or customer requirements
---------	--------------------------------------
