Overview

Professional Aerial Work Solution

The S177C Truck-Mounted Aerial Work Platform is a versatile and high-reach vehicle designed for demanding aerial tasks in industries such as telecommunications, infrastructure maintenance, and construction. Engineered for flexibility, it features a 360-degree rotating turntable and a high-performance articulating boom capable of extending across barriers. This unit ensures precision, safety, and efficiency for personnel working at heights, making it an essential asset for specialized urban and industrial applications.

Performance Metrics

Key Performance Indicators

17.2 m

Working Height

220 kg

Lifting Capacity

7.4 m

Max Outreach

Technical Specifications

Dimensions & Physical

Parameter	Value
Platform Size	1500x800x1150 mm
Height (Stowed)	2400 mm
Length (Stowed)	5790 mm
Width (Stowed)	2100 mm

Rotation Specifications

- 360
- 180

Operational Features

Control System	Electrical proportional control
Outrigger Mechanism	Hydraulic
Boom Configuration	Steel single quads type
Chassis Specification	3.5T

Applications

Suitable Industries	Electricity, Communication, Streetlights, Firefighting, Construction, Garden Maintenance, Advertisement, Photography, Highway Maintenance, Oil & Gas, Airport Services
