

Truck-Mounted Concrete Pump with Multi-Section Boom

This is a concrete pump mounted on a truck chassis. It features a multi-section boom for precise concrete placement.

Overview

High-Efficiency Concrete Delivery

This heavy-duty truck-mounted concrete pump is engineered for demanding construction environments, featuring a multi-section boom system designed for precise and flexible concrete placement. Built on a robust multi-axle chassis, it ensures optimal weight distribution and stability during operation. This machinery is an essential asset for reliable, high-volume concrete delivery on complex job sites.

Technical Specifications

Boom Configuration	Multi-section boom
Chassis Type	Multi-axle heavy-duty truck
Primary Application	Construction, Concrete Placement, Heavy-Duty

Performance Metrics

Operational Capabilities

- Precise concrete placement
- High stability design
- Efficient weight distribution
