

Tunnel Segment Casting Mould

This heavy-duty steel mould is designed for precise casting of tunnel segments. Its robust construction ensures dimensional accuracy and structural integrity of concrete segments.

Product Overview

Tunnel Segment Casting Mould

This heavy-duty steel mould is precision-engineered for the casting of high-quality concrete tunnel segments. It features a reinforced framework that ensures structural integrity and dimensional accuracy, making it ideal for demanding industrial infrastructure projects. With its modular design and efficient pouring portholes, it provides consistent performance and ease of use in diverse tunneling applications.

Technical Specifications

Key Features

- Modular design for assembly and disassembly
- Reinforced framework for high stability
- Multiple portholes for pouring and vibration
- High dimensional accuracy

Material	Robust heavy-duty steel
-----------------	-------------------------

Application Areas

Primary Applications	Transportation Infrastructure, Utility Projects, Tunnel Construction
-----------------------------	--
