

Turbo Cup Grinding Wheel

This grinding wheel is designed for aggressive material removal and efficient grinding. Its turbo design facilitates faster cutting and reduced heat buildup, making it ideal for concrete, stone, and masonry surfaces.

Product Overview

Professional Turbo Grinding Performance

This professional diamond turbo cup wheel is engineered for aggressive material removal and high-efficiency grinding. The specialized turbo design promotes rapid cutting and effective heat dissipation, making it ideal for concrete, stone, and masonry applications. Built for both wet and dry use, this tool provides a superior finish, reduced vibration, and significantly extended operational life.

Technical Specifications

Performance Features

- High density diamond segment
- Venting holes for cooling and chip removal
- Noise reduction design
- High tooth height for increased durability
- Aggressive material removal for faster edge work

Base Material	65mn steel
Application Compatibility	Concrete, Stone, Masonry, Wet Grinding, Dry Grinding

Logistics and Packaging

Available Packaging

Double blister • Plastic hanger with label • Card sleeve • Color box
