

Turbo Generator Set

This turbo generator set is engineered for high-output power generation in industrial settings. It features a robust design with key components including a stator, rotor, and silicon-steel sheets.

Overview

High-Performance Turbo Generator Set

This industrial turbo-generator set is engineered for high-output power generation, featuring a robust, heavy-duty construction suitable for demanding environments. The unit includes a precision-machined rotor assembly and a durable turbine housing designed for long-term operational reliability. Ideal for large-scale engineering projects, this system combines intricate mechanical design with sturdy mounting to ensure stability and efficiency during power production.

Technical Specifications

Key Components

- Blue turbine housing
- Red rotor assembly
- Shaft and flange assembly
- Support frame

Construction Type

Multi-stage industrial turbo-generator

Design Features

Multi-stage rotor, Enclosed housing, Viewing ports, Heavy-duty base

Performance Metrics

Performance Highlights
