

TV-DVD Combo Unit Circuit Board

This is a replacement circuit board for TV-DVD combo units. The board incorporates various electronic components such as capacitors, resistors, and transformers for signal processing and power supply.

Product Overview

Professional Grade TV-DVD Circuit Board

This specialized circuit board is designed for integration into TV-DVD combo units, providing essential power supply, signal processing, and control functionality. It features a robust layout with both surface-mount and through-hole components to ensure stable electrical performance. The inclusion of a high-voltage transformer and multiple connector interfaces makes this an ideal replacement component for maintenance and repair applications.

Technical Specifications

Key Components

- High-voltage transformer
- Integrated circuits
- Capacitors
- Resistors
- Ribbon cable connectors

Compatibility

TV-DVD Combo Units

Model Identifier

1100-00-339

Construction Style

Surface-mount, Through-hole
