

TV Radio Signal Distribution Amplifier

This distribution amplifier is designed to boost UHF, VHF, and FM signals by 24dB. It is suitable for distributing TV and radio signals to multiple devices and features input/output connectors and an FM trap switch.

Product Overview

Professional Signal Distribution

This high-performance distribution amplifier is engineered to boost UHF, VHF, and FM signals by an impressive 24dB, ensuring clear reception across your network. Designed for versatility, it efficiently distributes TV and radio signals to multiple output devices from a single input source. With an integrated FM trap switch and standard 220V power operation, it provides a reliable solution for maintaining signal integrity in demanding professional installations.

Technical Specifications

Signal Gain

24 dB

Gain

Frequency Bands

UHF, VHF, FM

Input Power Requirements

220V 50Hz

Features

Integrated Features

- FM Trap switch
- Multi-output distribution capability
- High-efficiency signal amplification

Compliance Status

Standard Power • Signal Optimized
