

Twin-Cylinder Air Compressor Pump with Cooling Fins

This air compressor pump features a twin-cylinder design for efficient air compression. Cooling fins ensure effective heat dissipation, while vibration dampeners minimize operational noise.

Product Overview

High-Performance Compression

This twin-cylinder air compressor pump is engineered for durability and consistent air output. Featuring integrated cooling fins for enhanced thermal management, it effectively dissipates heat during operation to maintain efficiency. The unit is designed with robust mounting features and built-in vibration dampeners, ensuring stable performance in demanding work environments.

Technical Features

Key Components

- Oil fill cap
- Integrated pressure gauge
- Corrugated connecting hose
- Cast base for mounting

Design Specifications

2 pcs

Cylinder Count

Configuration	Twin-Cylinder, Air-Cooled
Vibration Dampening	Yes
