Product Overview

High-Performance Twin-Cylinder Diesel Engine

This twin-cylinder diesel engine is specifically engineered for high-demand power generation applications. It combines advanced combustion efficiency with a compact, lightweight architecture for versatile integration into generators and pumps. Featuring all-weather starting capabilities and a protective oil alert system, it ensures reliability and durability in challenging operational environments.

Key Features

Engine Advantages

- Proven economic fuel consumption
- Compact and lightweight design
- Reliable all-weather starting
- Automatic low oil level cut-out
- Heavy-duty air filtration system
