

Twin Shaft Concrete Mixer

This double shaft concrete mixer is designed for efficient and high-volume mixing of concrete. The twin-shaft design ensures thorough and homogenous mixing of various concrete mixtures, including those with aggregates, cement, water, and additives.

Overview

High-Efficiency Twin Shaft Mixing

This double shaft concrete mixer is engineered for high-volume, efficient production in demanding environments such as ready-mix concrete plants and precast facilities. Its robust twin-shaft design ensures thorough, homogenous mixing of all concrete components, including aggregates, cement, and additives. Built with a heavy-duty frame and durable components, it offers reliable performance and precise control for large-scale construction projects.

Technical Specifications

Safety Systems

- Emergency stop buttons
- Protective guards

Build Quality

Heavy-duty frame • Durable mixing components

Mixing Technology

Twin-shaft

Suitable Applications

Ready-mix Concrete Plants, Precast Concrete Production, Large Construction Projects
