

Twin Shaft Concrete Mixer

This twin shaft concrete mixer is designed for heavy-duty concrete mixing. It features a high-capacity mixing chamber and a powerful electric motor for consistent mixing.

Overview

High-Efficiency Twin Shaft Mixer

The Twin Shaft Concrete Mixer is engineered for demanding heavy-duty applications in large-scale construction and precast concrete production. Its robust twin horizontal shaft configuration ensures superior mixing homogeneity and efficiency, delivering consistent high-quality output. Built for durability, this powerful system is optimized for intensive daily use in professional industrial environments.

Technical Specifications

| | |
|------------------|------------------------|
| Model Series | JS2000 |
| Mixing Mechanism | Twin Horizontal Shafts |

Application

| | |
|--------------------------|--|
| Recommended Applications | Large-scale construction, Precast concrete production, Heavy-duty mixing |
|--------------------------|--|

Key Features

Design Highlights

- High-capacity mixing chamber
- Durable heavy-duty construction
- Powerful electric drive motor
- Efficient forced mixing performance
