

Twin Shaft Concrete Mixer

This concrete mixer features a hopper for material input and a mixing drum with twin horizontal shafts to ensure thorough blending. It is ideal for various construction applications, delivering consistent and high-quality concrete output.

Overview

High-Efficiency Twin Shaft Mixer

The JS500 twin horizontal shafts forced mixer is a robust industrial solution designed for high-performance concrete production. Equipped with a dedicated material input hopper and a heavy-duty drum, it ensures thorough and consistent blending for various construction projects. Its sturdy support structure and integrated access systems provide both operational stability and ease of maintenance.

Performance Metrics

Mixer Type	Twin Horizontal Shafts Forced Mixer
Model	JS500

Design Features

Construction Features

- Twin horizontal mixing shafts
- Material loading hopper
- Integrated maintenance ladder
- Heavy-duty steel support structure

Operational Details

Power Source	Electric Motor
