

Twin Shaft Concrete Mixer

This twin shaft concrete mixer is designed for efficient and thorough mixing of concrete. Its robust construction ensures durability and reliability in demanding construction environments.

Product Overview

Professional Twin Shaft Forced Mixer

The JS1500 is a high-performance twin horizontal shaft forced mixer engineered for the efficient and thorough homogenization of concrete mixtures. Its robust construction is designed to withstand the rigorous demands of medium to large-scale construction environments, ensuring long-term reliability and consistent output quality. This versatile mixer integrates a powerful motor with a heavy-duty mixing mechanism to deliver optimal performance for professional construction projects.

Technical Specifications

Model	JS1500
Mixing Mechanism	Twin Horizontal Shaft, Forced Mixing

Performance Metrics

Performance Features

1500 L

Discharge Capacity

Application

Suitable Scale

Medium-scale projects • Large-scale projects
