

# Two-Roll Metal Straightening Machine

This two-roll metal straightening machine is designed for industrial applications. It features precision rollers and a control panel for adjusting roller pressure and speed.

## Overview

### High-Precision Two-Roll Straightening

This two-roll straightening machine is engineered for high-precision processing of round steel, including bars and tubes. Designed for efficiency and low energy consumption, the equipment meets international machining standards for industrial applications. It offers a robust solution for straightening raw materials with diameters ranging from 10mm to 160mm.

## Technical Specifications

### Processing Diameter Range

<b>10 mm</b> Minimum Diameter	<b>160 mm</b> Maximum Diameter
----------------------------------	-----------------------------------

<b>Machine Type</b>	Two-Roll Straightening Calender
<b>Key Features</b>	High Efficiency, Low Energy Consumption, High Precision

## Market Reach

### Export Markets

- Russia
- Japan
- India
- Taiwan
