

Two-Spindle CNC Machining Center

This high-precision machining center is engineered for complex milling and turning tasks. Equipped with dual spindles, it enables simultaneous machining, boosting throughput and decreasing cycle times.

Product Overview

High-Precision Two-Spindle Machining Center

This high-precision two-spindle machining center is engineered for complex milling and turning operations. By utilizing dual spindles for simultaneous machining, it significantly increases throughput and reduces cycle times for demanding production environments. The machine features advanced CNC controls for precise toolpath management and robust construction to ensure stability during high-speed operations, making it ideal for manufacturing intricate parts with tight tolerances.

Technical Features

Automation Systems

- Automated tool changing system
- Advanced CNC control system
- Integrated cooling system

Number of Spindles

2

Operations

Milling, Turning

Performance

Key Performance Metrics

2 Units
