Two-Step Automatic PET Bottle Blow Molding Machine

This two-step automatic stretch blow molding machine is designed for producing PET bottles. It features a compact design with integrated heating and blowing stations.

Overview

High-Efficiency PET Bottle Production

The CSD-2P is a professional-grade, two-step automatic stretch blow molding machine engineered for consistent PET bottle manufacturing. Its compact architecture integrates heating and blowing stations into a single streamlined system, optimizing floor space and operational flow. Designed for high efficiency, the machine features an intuitive control panel that allows operators to easily adjust parameters and monitor production quality for various bottle sizes and shapes.
