

Two-Stroke Gasoline Engine - 1E36F-2

This 2-stroke gasoline engine is designed for small machinery applications. It features a carburetor for fuel mixing, recoil starter for ignition, and cooling fins for heat dissipation.

Product Overview

Compact Power Solution

This 1E36F-2 two-stroke gasoline engine is engineered for versatility and portability in handheld power equipment. Featuring a reliable recoil starter and efficient fuel mixing via a carburetor, it is designed for demanding applications like brush cutters and trimmers. The integrated cooling fins on the cylinder head ensure optimal heat dissipation during operation, maintaining performance in compact, lightweight configurations.

Technical Specifications

Engine Type	2-Stroke Gasoline Engine
Model	1E36F-2
Ignition Method	Recoil Starter

Design Features

Cooling Mechanism

Air-cooled • Cylinder Head Fins

Common Applications

- Brush Cutters
- Trimmers
- Handheld Power Equipment
