

Two-Way Network Splitter

This two-way splitter is designed for network communication, splitting one input signal into two outputs. It has a metal housing, F-connectors, and mounting brackets.

Overview

Professional Two-Way Network Splitter

This two-way network splitter is engineered to efficiently divide a single input signal into two distinct output signals. Constructed with a durable metal housing, it provides essential electromagnetic shielding and robust protection for long-term reliability. Featuring standard F-connectors and integrated mounting brackets, this device ensures secure connections and straightforward installation in various professional environments.

Technical Specifications
