

Two-Wheel Walking Tractor

This agricultural machinery is a two-wheeled tractor designed for various farming tasks. It features a robust engine and large, lugged tires for traction.

Overview

Versatile Agricultural Power

This two-wheeled walking tractor is engineered for essential farming tasks, providing robust performance in diverse field conditions. Its compact design and adjustable handling system ensure high maneuverability, making it ideal for plowing, tilling, and cultivating in tight spaces. Equipped with large, high-traction lugged tires and a powerful engine, this machine offers reliable power for small to medium-scale agricultural operations.

Technical Specifications

Key Features

- Adjustable operator handles
- Integrated headlight for visibility
- High-traction lugged tires
- Robust engine design

Machine Type	Walking Tractor / Two-Wheel Tractor
Primary Applications	Plowing, Tilling, Cultivating
