

Two/Three Speed Shaded Pole Motor

This single-phase shaded pole motor is designed for operating at two or three speeds. The motor features a compact design and includes color-coded wires for electrical connections.

Product Overview

High-Efficiency Shaded Pole Motor

The YJ48 is a specialized single-phase shaded pole motor engineered for versatile performance in cooling and ventilation applications. It offers the flexibility of two or three-speed operation, allowing for precise control in low-power systems. Its compact and durable construction makes it an ideal component for integrated mechanical assemblies requiring reliable, multi-speed functionality.

Technical Specifications

Speed Options

- Two-speed operation
- Three-speed operation

Motor Type

Single-phase shaded pole

Design and Connectivity

Construction Details

- Black motor housing
- Yellow insulating coil material
- White plastic support frame

Wiring Connections

Red wire, Black wire, White wire
