

UHF 13 Series Communication Antenna

The UHF 13 series antennas are designed for optimal performance in the Ultra High Frequency band. Constructed from durable, weather-resistant materials, these antennas ensure reliable operation in various environmental conditions.

Product Overview

High-Performance UHF Communication

The UHF 13 Series antennas are precision-engineered for professional applications requiring optimal signal reception and transmission in the Ultra High Frequency band. Built with weather-resistant materials, these units ensure reliable, long-term operation even in challenging environmental conditions. Their high-gain design maximizes bandwidth while minimizing signal loss, making them an ideal solution for broadcast television, two-way radio communication, and wireless data transmission.

Technical Features

Frequency Band	UHF (Ultra High Frequency)
Build Quality	Weather-resistant, High-gain design, Precision-engineered

Applications

Suitable Applications

- Broadcast television
- Two-way radio communication
- Wireless data transmission

Installation

Setup and Adjustment	Designed for easy installation and convenient field adjustment.
